

**Synergy Resources** now offers testing services to the capacity of 50,000 PSI (3500 Bar). The testing is done hydrostatic in a controlled environment. The system has a 6 port outlet manifold to test multiple hoses and or components at once. Our focus is to offer a service that will help companies maintain compliance.

#### **What are the Benefits of Hose Testing?**

- Most importantly, hose testing provides a higher level of safety.
- Is key in the preventive maintenance process
- Can prevent untimely downtime and work stoppages.
- It also reduces the chances of leaks or ruptures that may cause damage to the environment.

We also provide hose testing documents that will have all testing parameters listed with certifications. It can also be used to notify the customer when the hoses are due for annual testing inspections.

Hose testing can be provided for Hydraulic & Industrial hose applications. We can test new & and recertify hoses that have been in service.

Please call Synergy Resources for more information.
